DETAILED ACTION

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character “27” has been used to designate both the resist pattern in Figure 14 and the patterned thin film in Figure 15 (the patterned thin film is --29-- in paragraph [0054] line 5 of the specification, rather than “27” as shown in Figure 15). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The replacement sheet(s) should be labeled “Replacement Sheet” in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

Claims 1-2 and 4-47 are allowed.

The following is an examiner’s statement of reasons for allowance: Okoroanyanwu et al. (US Patent 6,653,231) in combination with the previously cited art references clearly teaches (1) narrowing of a developed resist pattern by subsequent hardening as shown in Figures 4A-4C and then trimming of the resist pattern to sub-lithographic critical dimensions as shown in Figure 5 (abstract, reading on the instant narrowing of a resist pattern below an optically theoretical limitation) and (2) cross-linking of at least surface portions of a developed resist pattern before

trimming to narrow the developed resist pattern, in order to increase the interfacial toughness of the substrate-resist polymer bond (i.e. the bond between feature 50 (the hardened resist pattern before trimming) and layer 28 (directly underlying the resist), as shown in Figures 4A-4C, column 6 lines 23-30). However, none of the prior art searched specifically teaches *increasing bond strength between the pre-resist pattern and a base material by increasing an amount of relative contact area of the pre-resist pattern and the base material by ash-treating the pre-resist pattern* (emphasis added), as now recited by instant claims 1, 14, 17, 21, 24, 27, 31, 34, 37, 41, and 47.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

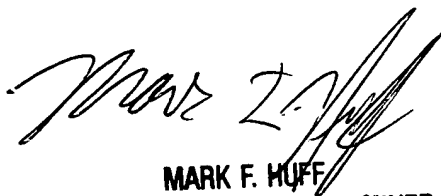

This application is in condition for allowance except for the objections to the drawings, as set forth above.
